WEIGHT MANAGEMENT SOLUTIONS

Xanthigen®

A NEW CLASS OF WEIGHT MANAGEMENT SUPPLEMENT

Xanthigen® supports healthy body weight through the synergistic effects of the natural compounds found in Brown Seaweed (*Undaria pinatifida*) and Pomegranate Seed Oil.

Separately, the bioactive compounds in these two ingredients target pathways involved in body weight regulation including adipocyte differentiation, resting energy expenditure and lipid metabolism. Combined in Xanthigen® they support weight loss as demonstrated in a published clinical trial. This study involved a total of 151 obese, non-diabetic females and showed significant weight loss by those taking Xanthigen® versus those taking placebo over the course of the 16 week trial.

WOMEN TAKING SATIEREAL REPORT DECREASED HUNGER

Satiereal® is a patented, clinically-studied satiety ingredient derived from saffron. Satiereal® encourages weight loss while eliminating frustration. This product has a unique mechanism that may support satiety by helping to avoid snacking and compulsive eating behaviors, which may, in turn lead to reduction in weight and inches.

Satiereal® is derived from the flowers of saffron crocus, *Crocus sativus* L., which is cultivated throughout the Mediterranean region. Satiereal® is believed to act directly at the neurotransmitter level to help increase satiety and reduce appetite.

NATURAL WEIGHT MANAGEMENT AND FAT LOSS

Slimvance™ is a patented, clinically-studied dietary ingredient targeting body composition by inhibiting adipose (fat) cell formation and enhancing the breakdown of fatty tissues. Comprised of three herbs commonly found in foods and supplements, a long history of use is well established.

In a double-blind, placebo-controlled human study, Slimvance™ has been shown to promote weight loss, reduce Body Mass Index (BMI) and positively impact cholesterol, triglycerides and serum adiponectin levels. Adiponectin is a protein hormone that modulates a number of metabolic processes, including the regulation of glucose and the breakdown of fatty acids for use by the body as energy.
