

Xanthigen®

SUPPORTS
BODY FAT REDUCTION
AND WEIGHT LOSS

Clinically studied to support weight management:

- Body weight loss
- Body fat reduction
- Decreased waist circumference
- Improved lipid profiles

Xanthigen® supports healthy body weight through the synergistic effects of the natural compounds found in Brown Seaweed (*Undaria pinnatifida*) and Pomegranate Seed Oil.

Separately, the bioactive compounds in these two ingredients target pathways involved in body weight regulation including adipocyte differentiation, resting energy expenditure and lipid metabolism. Combined in Xanthigen® they support weight loss as demonstrated in a recent clinical trial. This study involved a total of 151 obese, non-diabetic females and showed significant weight loss by those taking Xanthigen® versus those taking placebo over the course of the 16 weeks trial.

SUBJECTS TAKING XANTHIGEN® SHOWED SIGNIFICANT WEIGHT LOSS AFTER 6 WEEKS

Xanthigen®

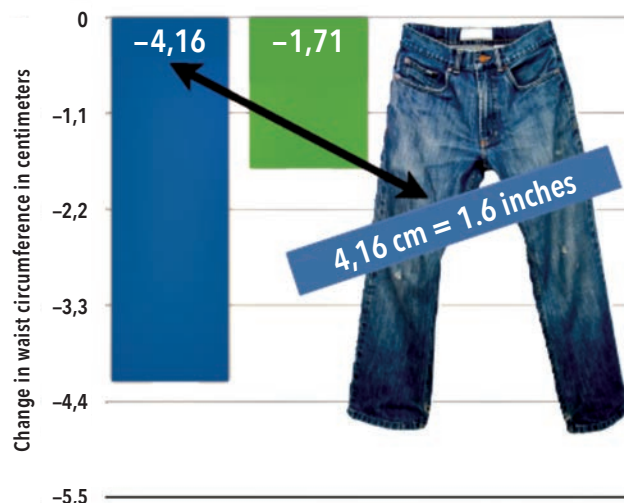

Xanthigen® is supported by clinical and pre-clinical research that shows efficacy in human subjects and provides an understanding of how Xanthigen® works.

Xanthigen® - Clinical Efficacy to Support Healthy Weight†

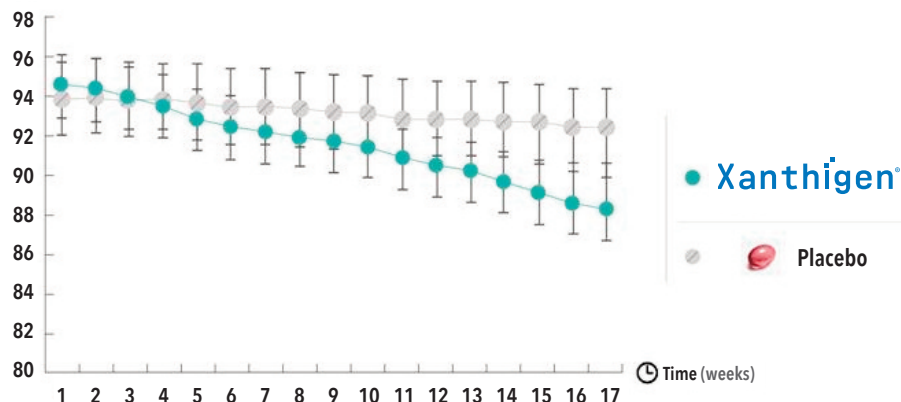

- Peer-reviewed, published, double-blind, placebo-controlled clinical trial
- Study subjects taking 600 mg Xanthigen® daily lost an average of 14.2 pounds (6.6 kg) over sixteen weeks. Significant differences in weight loss vs. placebo began at 6 weeks.
- Xanthigen® supplementation also resulted in significant body composition improvements including reduced body and liver fat.
- Significant improvements in blood lipids, liver enzymes and blood pressure demonstrate better overall health in subjects consuming Xanthigen®.
